

PLEATED BLACKOUT COLOURS

Uni-Blinds®

Innovation comes built-in

ADD A SPLASH OF COLOUR

Switch to total darkness on demand

The Uni-Blinds® pleated blackout integral blind sets new standards in its effectiveness to block out nuisance external light. It is designed to help where a property location or lifestyle means that standard blinds are simply not enough.

Encapsulated completely within the double glazed unit, the pleated blackout integral blind prevents light transmission thanks to an advanced blind fabric, as well as a design that eliminates light 'bleed' around the edges and cords.

It is available in two different control systems – the S System magnetic slider or C System manual corded – and its fabric also has a high thermal resistance to help to keep a room cool in summer months.

The integral blind is suitable for standard double glazed windows and doors in both new build and retrofit projects. It can also be incorporated in glazing which features slimmer sealed units too, with a Uni-Blinds® 20mm pleated blackout exclusively available.
